

SELECTION OF PORTRAITS AND ARCHITECTURAL FEATURES

A group of experts (the Feature Selection Advisory Group) has selected the attached examples of portraits, main architectural features and secondary architectural features which, in their view, could represent the relevant ages and styles.

The main objective of this group of experts was set out in their mandate in the following terms:

“The task of the Feature Selection Advisory Group is to make proposals concerning a set of features for the future European banknotes based on the theme “Ages and Styles of Europe”. The features should be chosen to symbolise Europe and to contribute to the acceptability of the banknotes among the population by ensuring both a balance in the portraits between men and women, and an avoidance of national bias. The features chosen should be compatible with both the CNF and C appearance options: in the former the “N” feature would be left to national choice; in the latter the whole of the banknote would be common.”
